

Support tiers and response targets

Response targets

Every agent's tier sets how quickly the Platform team responds to an incident affecting it, and the availability the registry commits to for it. Response times are measured from the first page.

Tier	First response	Resolution target	Availability commitment
standard	1 hour	1 business day	99.5%
priority	15 minutes	4 hours	99.9%

Severity levels

Response targets apply to severity 1 and 2 incidents. Severity 3 issues are handled in the normal ticket queue, whatever the tier.

Severity	Meaning	Example
1	Agents can't serve users	Registry unreachable
2	Agents degraded	Latency alert firing for over 30 minutes
3	No user impact yet	A dashboard panel not refreshing

Changing tiers

A move to the priority tier needs sign-off from the team's budget holder, as the agent owners' FAQ describes. The new targets apply from the first incident after the change.
